

Methodology for CO-504 - Colorado Springs/El Paso County CoC

Sheltered Population Total

1. What data source(s) was used to produce the total number of people included in the sheltered population (staying in an emergency shelter, Safe Haven, or transitional housing) on the night of the count? Please indicate the percentage of the PIT count derived from each of the sources. (If a source was not used, please enter zero).

HMIS Data	89%
Provider-level surveys	0%
Client-level surveys	9%
Observation	0%
Other	2%
Total	100%

2. Was the CoC able to collect information about the number of people being sheltered on the night of the count from all emergency shelters, Safe Havens, and transitional housing projects listed on the HIC or only some? listed on your HIC or only some?

- Complete census count

3. What information or method(s) was used to de-duplicate the count of the total number of people included in the sheltered population?

- Comparison of personally identifying information (PII), such as name, date of birth, and Social Security Number
- Comparison of unique client identifiers (not PII)

Sheltered Subpopulation

4. What data source(s) was used to produce the demographic and subpopulation data included in the sheltered population (staying in an emergency shelter, Safe Haven, or transitional housing) on the night of the count? (select all that were used)

- HMIS Data
- Client-level surveys

Point In Time Methodology for CO-504 - Colorado Springs/El Paso County CoC

- Other: The DV ES provided non identified information

5. Was the CoC able to collect information about the demographic and subpopulation characteristics of all sheltered people or only some?

- All sheltered people

6. Looking at the change in your sheltered count from last year's count, please choose up to three reasons that best explains these changes from the drop down list below.

- Change in PIT count methodology
- Change in participation of programs serving general homeless populations (e.g., singles, families)
- Increased or improved PIT count training
- More volunteers for PIT count
- Change in awareness of PIT count and relevant resources
- Impact of coordinated entry

Please provide a brief description of these specific factors (500 word limit):

Every year we continue to do a better job with the PIT counts due to outreach efforts, marketing the PIT survey efforts, and educating on the purpose of the survey. Due to the increased outreach efforts our community is able to better identify those homeless and reach out to them, whether they are in a program entering into HMIS or not. Our community has a Winter shelter that is now a permanent shelter, as well as an organization now open in an overflow bed capacity.

Unsheltered Population

7. What approach(es) was used to count the total number of people included in the unsheltered population during the PIT count. (select all that were used)

- "Night of the count" - known locations

7a. Were certain areas within the CoC geography specifically excluded because the CoC had reason to believe there were no unsheltered people in those areas?

Yes

7b. How did the CoC select the areas that were included for canvassing?

- Areas were not selected randomly, but an effort was made to use local knowledge to target known locations (e.g., areas with known concentrations of unsheltered homeless people)

7b1. Did the CoC adjust the information in some way (e.g., statistical adjustment or extrapolation) to account for areas within the CoC geography that were not canvassed but where unsheltered people might have been on the night of the PIT count?

No

7c. In areas that were canvassed, did the CoC count all unsheltered people in those areas or a sample of people?

- All people encountered during the count

8. What information or method(s) was used to de-duplicate the total count of people in the unsheltered population? (Check all that apply)

- Comparison of personally identifying information (PII), such as name, date of birth, and Social Security Number
- Comparison of unique client identifiers (not PII)

Unsheltered Subpopulations

9. What approach(es) was used to collect demographic and subpopulation data about unsheltered people included in the unsheltered population during the PIT count?

- Surveys/interviews of people identified as unsheltered on the night of the PIT count
- Surveys/interviews of people identified as unsheltered on the night of the count, but completed at a later date
- Surveys/interviews of people identified within 7 days following the night of the PIT count night who may have been unsheltered on the night of the PIT count (e.g., "service-based" surveys at locations where people who are homeless go for assistance)

10. Were all people who were encountered during canvassing on the night of the count or during post night of the count PIT activities asked to complete a survey/interview?

- All people encountered were surveyed

11. What information or method(s) was used to produce an unduplicated total count of homeless people across your sheltered and unsheltered populations?

- Comparison of personally identifying information (PII), such as name, date of birth, and Social Security Number
- Comparison of unique client identifiers (not PII)

12. Looking at the change in your unsheltered count from last year's count, please choose up to three reasons that best explains these changes from the drop down list below

- Change in awareness of PIT count and relevant resources
- Impact of coordinated entry
- Other:

Please provide a brief description of these specific factors (500 word limit):

Anecdotally, we are hearing more people are moving to the area for marijuana laws. We have also had an increasing outreach effort over the years and have a community outreach program now helping with the Point In Time surveying. This outreach team uses a GPS map on mobile devices, in conjunction with the local Homeless Outreach Team Officers to ensure they know where camps are set up across the COC.

More people moving into the area
